

## Crerim acknowledged among the SAS Master's Programs

A further important result for the Università Cattolica **Credit Risk Management (CRERIM)** specializing Master's program.

The Master is now internationally acknowledged among the **SAS Master's degree Programs**.

To “bridge the gap between supply of and demand for analytical talent in today's business” corresponds in fact to one of the ideas at the basis of the Master program, designed to train highly qualified risk management professionals, a subject that requires specific skills and knowledge.

This means a solid analytical and quantitative training with a multidisciplinary vision of the credit risk, its management and its control.

Thanks to the partnership with the Institute, leader in analytics software, CRERIM gives students the opportunity to prepare for the *SAS Base official examination* and opens the door to the new professional possibilities in virtue of the international value of SAS certification as **Elena Beccalli**, Dean of the School of Banking, Finance and Insurance Sciences and Director of the CRERIM points out.

A partnership with reciprocal positive impacts, as highlights **Cinzia Gianfiori**, Academic Program Manager at SAS. The long-lasting collaboration between CRERIM and SAS, has shown how students have to cope with the professional world starting from their training allows them to develop specific skills and a knowledge of business issues that are essential to the new guidelines and demands coming from the market.

And a possible internationally recognised ‘risk analyst’ certification is a plus for candidates and companies.

The synergy with a relevant network of companies and organizations is central to the Master's design.

CRERIM, this year at its tenth edition, was born from the awareness that a factor of success for an organization is its capacity to operate under conditions of risk, especially when operating in the financial system. To do this, also given the contest transformed by the financial crisis, it is necessary to provide in-depth technical-legal training as well as a vision of risk management to other corporate functions, with a deeper understanding of innovative and specific areas of credit risk management, such as communication, retail credit risk, governance and influence of cognitive and behavioral distortions in the emergence of credit risk retail.

The Master offers the tools and the skills to manage credit risk activities in banks, insurance companies, consultant firms, IT vendors, with a wide range of career chances. An opportunity not only for young graduates, but also for professionals willing to enhance their position.
